

curriculum vitae

George Philp started his career with the UK National Health Service in 1989. Specialising in Haematology and Transfusion Medicine, George attained Fellowship of the Institute of Biomedical Sciences in 1984. His final position prior to joining the IT industry was in Good Hope Hospital, Sutton Coldfield, England where he ran the Blood Transfusion and Special Haematology departments. It was during this time that George developed an interest in how IT could benefit healthcare in general, and laboratory medicine in particular. One of George's legacies was his development of an international quality assurance scheme for haematinics.

Since 1989 George has worked for a number of different companies within the laboratory medicine IT arena. This has brought him experience of product training and implementation, project management, and more recently product management. George is the Portfolio Manager for Pathology Products within the iSOFT Group and has particular responsibility for the globalisation of strategic products and works extensively with the design and development teams to facilitate this.
